

6Ath Grade: Unit 13, Lesson 9

1. What is the correct regrouping for the expression below?

$$(4.8y - 1.5) - (6.4y - 3)$$

2. What is the simplification of the following algebraic expression using the fewest possible terms?

$$(-4x + 8) - (-2x - 2)$$

3. Javon is asked to find the difference of the following algebraic expression in simplest form. What is Javon's final answer?

$$(3x + 4) - (x - 1)$$

4. What is the simplification of the algebraic expression below?

$$(x + 7) - (-x + 3) + (4x + 9)$$

5. Simplify the algebraic expression $(7r + 5) + (2r - 2) - (3r - 11)$.

6. Write a possible expression that results in the following regrouping below.

$$-x + 3x - 5x + 10 - 4 + 7$$
