

The average price of milk, in dollars (\$), for each month for 7 years was recorded and used to create the box plot shown. Use the box plot for questions 1-6.

1. The minimum price is \$2.66, while the maximum price is \$3.57.
2. The median price is \$2.90.
3. The upper quartile is \$3.13.
4. The lower quartile is \$2.78.
5. The range is \$0.91.
6. The interquartile range is \$0.35. The IQR was calculated by subtracting Q_1 from Q_3 .

A farmer recorded the number of eggs her farm full of hens laid in one week. The box plot represents the number of eggs laid by each hen during that week. Use the box plot for questions 7-10.

7. Write a description of the spread and distribution of the number of eggs laid.
The least number of eggs laid was 2, while the most eggs laid was 10. The range was 8, which is a large spread for egg laying. The median amount of eggs laid was 6.
8. What percentage of hens laid 2 or more eggs?
100%
9. What percentage of hens laid between 6 and 10 eggs?
50%
10. What percentage of hens laid between 2 and 8 eggs?
75%
