

Grade 6 Accelerated
Unit 5
Lesson 7 Practice

Name **Answer Key** _____
Date _____
Period _____

1. Several rates are listed. Locate those that represent a unit rate. Select all that apply.

- ☐ earning \$56 for 4 hours of work
- ☒ driving 66 miles per hour
- ☐ traveling 45 miles in 10 minutes
- ☐ 2 cheeseburgers for \$4.50
- ☒ one yard of material for \$9.99

2. Jillian is shopping material for bedroom curtains. Her favorite material is on sale. The material is sold by the yard. Jillian set up a table to help determine the cost.

Material Needed	Cost
one panel – 12 yards	\$36.00
one top curtain – 3 yards	\$9.00
tie backs - 1.5 yards	\$4.50

- a. Complete the table for Jillian.

- b. What is the unit rate for the material?

$$\frac{\$36}{12} = \$3/\text{yard}$$

- c. If Jillian spends \$103.50, she has purchased **34.5** yards of material for her curtains.

$$\frac{\$103.50}{3}$$

3. Complete the statement.

Unit rate for

- ☒ cost per hour
☐ hour per cost

can be determined by

- ☐ multiplying
☒ dividing

the amount of

- ☒ money
☐ hours

by the amount of

- ☐ money
☒ hours

.

4. If the unit rate of a CocoNuttty candy bar is $\frac{1}{\$1.09}$, the cost of a case of 24 candy bars is **\$26.16**.

$$(1.09)(24)$$

Ice Treats employees 4 high school students. The table represents how much money each person earns in a workweek.

Employee	Weekly Pay	Hours Worked
Michael	\$142.50	15
Tricia	\$106	10
Libby	\$246	20
Thomas	\$85.50	10

Use the table for questions 5 through 8.

5. What is the hourly rate for Libby?

$$\frac{246}{20} = \$12.30/\text{hr}$$

6. Which employee earns a lower hourly rate, Michael or Tricia?

$$M \frac{142.50}{15} = \$9.50/\text{hr}$$

Michael earns a lower hourly rate.

$$T \frac{106}{10} = \$10.60/\text{hr}$$

7. The newest employee is

☒ Thomas
☐ Michael

 because he has the

☒ lowest
☐ highest

 hourly rate.

8. Thomas is on the schedule next week to work 12.5 hours. What will be his weekly pay?

$$\$8.55 \times 12.5 = \$106.88$$

9. One scoop of powder baby formula is 8.9 grams. That is a unit rate of 1 to 8.9. If the can holds 566 grams, how many whole scoops are in the can?

$$\frac{566}{8.9} \approx 63.6 \text{ scoops}$$

10. The formula bottle made for Charlie has a water (ounces) to powder formula (scoop) ratio of 6 : 3. What is the unit rate of water to formula?

$$\frac{6 \text{ water}}{3 \text{ powder}} \qquad 2 \text{ oz water/scoop}$$
