

A large drink dispenser holds 20 quarts of lemonade.

Use the number line diagram for questions 1 through 5.

- Complete the diagram that represents the measurement and percentage of lemonade in a dispenser.
- How many quarts of lemonade is in the dispenser if it is 50% full?
10 quarts
- What percentage of the lemonade is 12 quarts?
60%
- The dispenser will need to be refilled when the lemonade has dropped to 20%,
or ☐ 2 ☒ 4 quarts.
- If the dispenser is 70% full, how many quarts of lemonade have been consumed?
30% has been consumed = 6 quarts

The table represents the volume of a large water fountain and the corresponding percentages.

Volume	Percentage
250 gallons	100
187.5 gallons	75
125 gallons	50
62.5 gallons	25

6. As the maintenance person was filling the fountain, he wanted to keep a record of the gallons per 25% capacity. Complete the table.
7. If the water falls below 50%, the fountain pump will not work properly. What is the minimum gallons that must always be in the fountain?

125 gallons

8. The fountain is always circulating 62.5 gallons of water in the spraying system. What percentage of the water is always circulating in the spray?

25%

9. When the fountain is at 75% capacity,
☒ 187.5
☐ 125
 gallons of water are in the fountain.

10. The fountain loses 40 gallons a week due to evaporation. About how many weeks till the fountain is at 50%?

$$\frac{125}{40} = 3.125 \approx 3 \text{ weeks}$$
