

Grade 6 Accelerated
Unit 5
Lesson 9 Homework

Name Answer Key
Date _____
Period _____

1. At a clothing store, a pair of jeans costs \$60. Using a coupon, Lyla buys the jeans for \$12 less than the original price. Complete the table.

Dollar Amount	Percentage
60	100%
12	20%

$\times \frac{1}{5}$ (arrow from 60 to 12)

$\times \frac{1}{5}$ (arrow from 100% to 20%)

2. The coupon gives Lyla 20 % off of the original amount.
3. How much did Lyla pay for the jeans (before tax)?

$$60 - 12 = \$48$$

4. In a bag of candy, 20% are blue. There are 30 candies in the bag. How many blue candies are there?

Candies	Percentage
30	100%
6	20%

$\times 0.2$ (arrow from 30 to 6)

$\times 0.2$ (arrow from 100% to 20%)

6 blue candies

5. For one math test, Salvatore had to answer 24 questions. Of those 24 questions, he answered 22 correctly. What percent did Salvatore get on his math test? Round to the nearest percent.

$$\frac{22}{24} = \frac{x}{100}$$

$$\frac{24x}{24} = \frac{2200}{24}$$

$$x = 91.\bar{6} \approx 92\%$$

6. Jeffrey has 40% as much money as Louis. Louis has \$80. Select all true statements.

- ☐ Jeffrey has \$32.
 ☐ Jeffrey has \$48.
 ☐ Louis has $\frac{2}{5}$ as much as Jeffrey.
 ☐ Louis has $\frac{5}{2}$ as much as Jeffrey.
- ☐ Jeffrey has $\frac{2}{5}$ as much as Louis.
 ☐ Jeffrey has $\frac{5}{2}$ as much as Louis.

$$\frac{80 \div 16}{32 \div 16} = \frac{5}{2} \quad \left| \quad \frac{\text{Louis}}{\text{Jeffrey}}\right.$$

Money	Percentage
80	100%
32	40%

$\times 0.4$ (from 80 to 32)
 $\times 0.4$ (from 100% to 40%)

7. A small pool holds 20,400 gallons of water. Devyn filled it up to 85% capacity but then had to stop to do her other chores. Complete the table to determine how many gallons of water Devyn put in the pool.

Number of Gallons	Percentage of Capacity
20,400	100%
17,340	85%

$\times 0.85$ (from 20,400 to 17,340)
 $\times 0.85$ (from 100% to 85%)

8. Devyn will need to fill the pool with 3,060 more gallons of water to be at 100% capacity.

$$20,400 - 17,340 = 3,060 \text{ gallons}$$

9. Many movie theaters offer a discount for students or children. At one local theater, a regular ticket for an evening show is \$17.99. A child's ticket for the same show is \$14.99. What percent of the full ticket price is a child's ticket? Round to the nearest percent.

Price	Percentage
17.99	100%
14.99	$\sim 83.32\%$

$\times \frac{14.99}{17.99}$ (from 17.99 to 14.99)
 $\times \frac{14.99}{17.99}$ (from 100% to $\sim 83.32\%$)
 $\approx 83\%$

10. Movie theaters often charge less for matinee showings. At the same theater, a matinee ticket for a child is 77% of the price of a regular adult's ticket. Adult matinee tickets cost \$9.09. How much does a child's matinee ticket cost? Round to the nearest penny.

Price	Percentage
9.09	100%
6.9993	77%

$\times 0.77$ (from 9.09 to 6.9993)
 $\times 0.77$ (from 100% to 77%)
 $\approx \$7.00$
