Period: \_\_\_\_\_ Date: \_\_\_\_\_

**7th Grade**  
**Lesson 5.3 Skills Practice Worksheet**

Use the data presented to make predictions about populations.

Jenae attends Rockledge Middle School that has 1,284 students. She asks a random sample of 100 students which app they used the most on their phone and the results are below.

| TikTok | Facebook | Snapchat | Instagram |
|--------|----------|----------|-----------|
| 54     | 3        | 15       | 28        |

Predict the number of students who spend more time on each app.

Presley has 323 students in the 7th grade at his school. He asked a random sample of 30 students what their favorite holiday is. The results are below.

| Holiday                | Sample results | Population prediction |
|------------------------|----------------|-----------------------|
| Halloween              | 9              |                       |
| Thanksgiving           | 6              |                       |
| Christmas/<br>Hanukkah | 14             |                       |
| 4th of July            | 1              |                       |

How could he increase the likelihood of his prediction?
