

Grade 6 Accelerated
Unit 7
Lesson 7 Practice

Name _____
Date _____
Period _____

1. Decompose the regular pentagon into only triangles.

2. Decompose the regular hexagon into triangles and quadrilaterals.

3. A hexagon is given in inches (in). Each side of the hexagon has a length of $7\frac{1}{2}$ inches and a perpendicular distance from the center to the midpoint of a side to be 4.7 inches. Find the area of the regular hexagon rounded to the nearest square inch.

4. Find the area of the regular pentagon that has a side length of 6 cm.

5. An octagon is shown with lengths in meters (m). What is the area of the octagon?

6. Label the regular decagon with the following dimensions.
Side length = $9\frac{3}{10}$ in.

$$a = 8.4 \text{ in.}$$

$$b = 12.54 \text{ in.}$$

Which of the dimensions is not needed to find the area of the decagon?

7. Find the area of the decagon from question 6 in square inches.

8. Mia wanted to find the area of the hexagon by decomposing it into two triangles and a quadrilateral. Help her decompose the hexagon and label any additional necessary dimensions.

9. Find the area of the hexagon above in square meters.
