

Grade 6 Accelerated
Unit 2
Lesson 4 Homework

Name _____
Date _____
Period _____

Identify which mathematical operation would be used to answer each question. Provide an explanation or sketch to support your response.

Information	Operation	Explanation / Sketch
1. Celine is training for a 5K race. On Monday, she ran $2\frac{3}{4}$ miles. On Tuesday, she ran $\frac{2}{3}$ of the distance she had run on Monday. How far did Celine run on Tuesday?		
2. Fariq is building part of a fence. He bought a wooden plank $5\frac{9}{10}$ feet long. If he needs to cut the plank into 8 equal-sized pieces, how long should each piece be?		
3. In 2021, there were 39.6 million people living in California, the most populous state in the US. Florida had the third-largest population in 2021 with 21.9 million residents. What was the difference between the two states' populations in 2021?		
4. The type of manatee found in Florida can weigh up to 1.65 tons. The smallest type of manatee only weighs up to 0.55 tons. How many times greater is the weight of the Florida manatee than the smaller manatee?		

For each real-world context, write a numeric expression that could be used to calculate the answer, then show your work and write your answer using the correct units.

Information	Numeric Expression	Work and Answer with Correct Units
5. Celine is training for a 5K race. On Monday, she ran $2\frac{3}{4}$ miles. On Tuesday, she ran $\frac{2}{3}$ of the distance she had run on Monday. How far did Celine run on Tuesday?		

6. Fariq is building part of a fence. He bought a wooden plank $5\frac{9}{10}$ feet long. If he needs to cut the plank into 8 equal-sized pieces, how long should each piece be?		
7. In 2021, there were 39.6 million people living in California, the most populous state in the US. Florida had the third-largest population in 2021 with 21.9 million residents. What was the difference between the two states' populations in 2021?		
8. The type of manatee found in Florida can weigh up to 1.65 tons. The smallest type of manatee only weighs up to 0.55 tons. How many times greater is the weight of the Florida manatee than the smaller manatee?		

At the end of the day yesterday at Joan's Perfect Pie Shop in Melbourne, FL, they had $3\frac{3}{8}$ apple pies and $2\frac{1}{2}$ coconut cream pies left and had sold out of all other pies.

9. Which of the questions could be answered using addition?
 - o How much more apple pie was left than coconut cream pie?
 - o How much total pie was left?
 - o If Joan split the leftover apple pie for her 3 employees, how much pie would they each get?
10. Using the question that you chose in number 9, write a numeric expression and answer the question. Show your work and include correct units.
