

Use the vertical number line to answer the following problems.

1. Plot 3.25 and its opposite.

2. Which is larger, 3.25 or its opposite?

3.25 because it is positive.
 $3.25 > -3.25$

Use the horizontal number line to answer the following problems.

3. Plot $-1\frac{3}{8}$ and its opposite.

4. Which is larger, $-1\frac{3}{8}$ or its opposite?

Its opposite as it is positive.

$$1\frac{3}{8} > -1\frac{3}{8}$$

5. Plot and label each value and its opposite on the number line: -1.6 , $3\frac{2}{3}$, 0.5 , $-\frac{5}{2}$

Complete each comparison statement for the pairs of numbers you plotted in question 5. Use $<$ or $>$ in the first blank and the given number's opposite in the second blank.

6. $-1.6 < 1.6$

7. $3\frac{2}{3} > -3\frac{2}{3}$

8. $0.5 > -0.5$

9. $-\frac{5}{2} < \frac{5}{2}$

10. A number line with the value $-\frac{2}{3}$ plotted is shown.

Stefan said that the opposite of $-\frac{2}{3}$ is $\frac{1}{3}$ because it's on the other side of 0. Explain whether you agree with Stefan.

Disagree, although it is on the other side of zero its value is not the exact same distance away from zero on the number line so they are not opposites.
