

Grade 6 Accelerated
Unit 3
Lesson 7 Homework

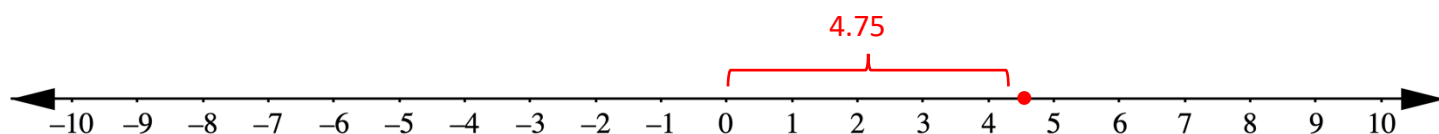

Name Answer Key
Date _____
Period _____

Complete each statement and model it on the number line.

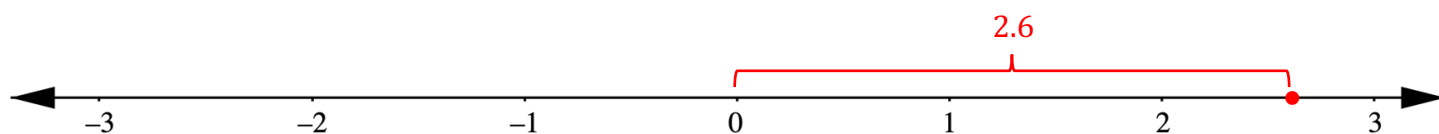

1. $|-7| = \underline{7}$

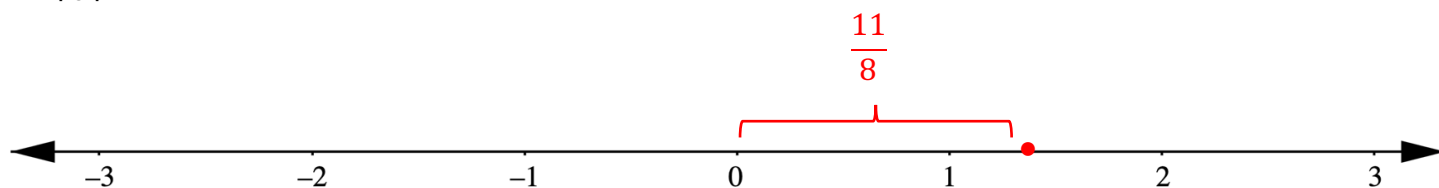

2. $|4.75| = \underline{4.75}$

3. $|-2.6| = \underline{2.6}$

4. $\left|\frac{11}{8}\right| = \underline{\frac{11}{8}}$

5. Sarita claims that $\left|5\frac{1}{3}\right| = -5\frac{1}{3}$. Explain whether you agree with Sarita.

I disagree with Sarita. The absolute value is how far away (distance) a number is from zero so $\left|5\frac{1}{3}\right|$ is $5\frac{1}{3}$ units away from zero.

Gerald received a bank statement that said his balance was $-\$72.85$.

6. What does it mean for Gerald's account balance to be negative?

It means he has spent more money than he has in his account.

7. What does the absolute value of Gerald's account balance mean in this context?

The absolute value of this balance would mean he has a balance of $\$72.85$ in his account.

8. The average elevation of the Florida Keys is 3.2 feet. What does the absolute value of the elevation mean in this context?

It means the elevation on average is 3.2 feet above sea level.

9. A bank account has a balance of $\$220$. Describe the meaning of each value in the context of transactions on the bank account.

Transaction	Interpretation
$\$53.45$	Gain of 53.45, he now has 273.45 in his account. (deposit)
$-\$18.99$	Loss of 18.99 (withdrawal), he now has 254.46 in his account.
$\$ 150 $	Gain (deposit) of 150, he now has 404.46 in his account.
$\$ 72.95 $	Gain (deposit) of 72.95, he now has 477.41 in his account.

10. The average high temperature in Anchorage, Alaska in February is 72° from 0°C . What could be the average high temperature in Anchorage, Alaska in February?

If it can be from 0 to 72 that means it could be either direction so the average can be -72° or 72° .
