6Ath Grade: Unit 5, Lesson 7

1. Gwen goes to the market and purchases 8 pears for $6.00. What is the unit rate for the price of pears at this market?

2. May earned $125 babysitting her neighbors for 6 hours. How can the unit rate be determined for the amount of money May earned per hour babysitting?

3. Is “32 miles for every 1 hour” an example of a unit rate?
