

Grade 6 Accelerated
Unit 5
Lesson 9 Practice

Name **Answer Key** _____
Date _____
Period _____

1. At a clothing store, a pair of jeans costs \$75. Using a coupon, Terese buys the jeans for \$18.75 less than the original price. Complete the table.

Dollar Amount	Percentage
75	100
18.75	25

$\times \frac{1}{4}$ (from 75 to 18.75) $\times \frac{1}{4}$ (from 100 to 25)

2. The coupon gives Terese 25 % off the original amount.
3. How much did Terese pay for the jeans (before tax)?

$$75 - 18.75 = \$56.25$$

4. In a bag of candy, 25% are yellow. There are 60 candies in the bag. How many yellow candies are there?

Candies	Percentage
60	100%
15	25%

$\times \frac{1}{4}$ (from 60 to 15) $\times \frac{1}{4}$ (from 100% to 25%) 15 yellow candies

5. For one math test, Blair had to answer 35 questions. Of those 35 questions, he answered 27 correctly. What percent did Blair get on his math test? Round to the nearest percent.

$$\frac{27}{35} = 0.7714 \dots \times 100 \approx 77\%$$

6. Jeffrey has 60% as much money as Louis. Louis has \$110. Select all true statements.

- ☒ Jeffrey has \$66.
- ☐ Jeffrey has \$44.
- ☒ Jeffrey has $\frac{3}{5}$ as much as Louis.
- ☐ Jeffrey has $\frac{5}{3}$ as much as Louis.
- ☐ Jeffrey has \$48.
- ☐ Louis has $\frac{3}{5}$ as much as Jeffrey.
- ☒ Louis has $\frac{5}{3}$ as much as Jeffrey.

$$\frac{66 \div 22}{110 \div 22} = \frac{3}{5} \quad \left| \quad \frac{\text{Louis}}{\text{Jeffrey}}\right.$$

Money	Percentage
110	100%
66	60%

$\times 0.6$ (from 110 to 66) and $\times 0.6$ (from 100% to 60%)

7. A small pool holds 25,400 gallons of water. Esa filled it up to 86% capacity but then had to stop to do her other chores. Complete the table to determine how many gallons of water Esa put in the pool.

Number of Gallons	Percentage of Capacity
25,400	100%
21,844	86%

$\times 0.86$ (from 25,400 to 21,844) and $\times 0.86$ (from 100% to 86%)

8. Esa will need to fill the pool with 3,556 more gallons of water to be at 100% capacity.

$$25,400 - 21,844 = 3,556 \text{ gallons}$$

9. Many movie theaters offer a discount for students or children. At one local theater, a regular ticket for an evening show is \$18.50. A child's ticket for the same show is \$13.50. What percent of the full ticket price is a child's ticket? Round to the nearest percent.

Price	Percentage
18.50	100%
13.50	72.97%

$\frac{\text{Adult}}{\text{Child}} \times \frac{13.5}{18.5}$ and $\times \frac{13.5}{18.5}$

$\approx 73\%$

10. Movie theaters often charge less for matinee showings. At the same theater, a matinee ticket for a child is 73% of the price of a regular adult's ticket. Adult matinee tickets cost \$8.75. How much does a child's matinee ticket cost? Round to the nearest penny.

Price	Percentage
8.75	100%
6.3875	73%

$\frac{\text{Adult}}{\text{Matinee}} \times 0.73$ and $\times 0.73$

$\$6.39$
