

Grade 6 Accelerated
Unit 6
Lesson 4 Homework

Name Answer Key
Date _____
Period _____

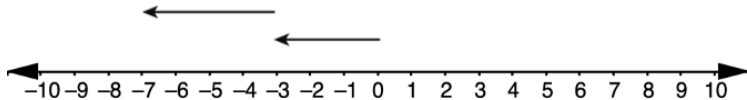

For each number line model, write the addition expression represented and find the sum.

1.

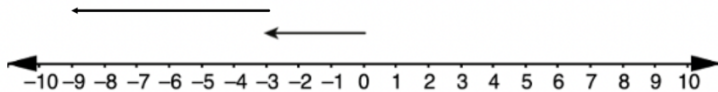

Addition Expression	Sum
$2 + (-7)$	-5

2.

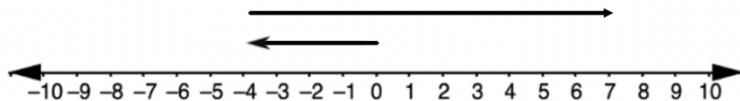

Addition Expression	Sum
$-3 + (-4)$	-7

3.

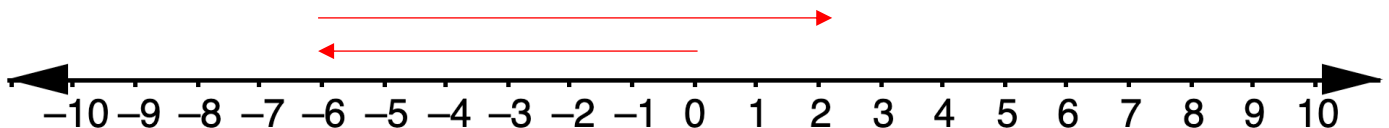

Addition Expression	Sum
$-3 + (-6)$	-9

4.

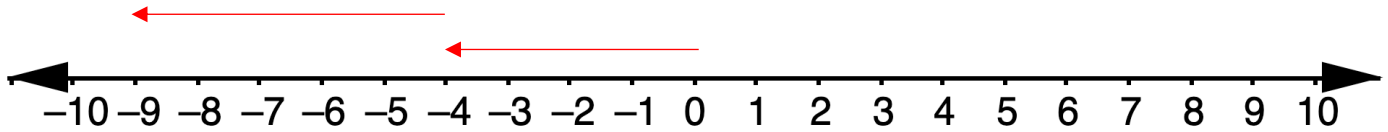

Addition Expression	Sum
$-4 + 11$	7

5. Use the number line to show the sum of $-6 + 8$. Then, complete the equation.

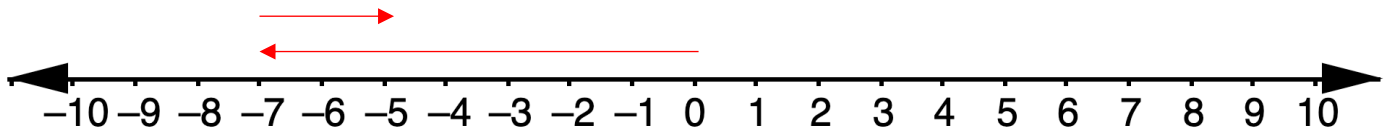

$-6 + 8 = \underline{2}$

6. Use the number line to show the sum of $-4 + (-5)$. Then, complete the equation.

$$-4 + (-5) = \underline{\text{ } - 9 \text{ } }$$

7. Use the number line to show the sum of $-7 + 2$. Then, complete the equation.

$$-7 + 2 = \underline{\text{ } - 5 \text{ } }$$

In a single day, the temperature in degrees Fahrenheit ($^{\circ}\text{F}$) of a town in Canada began at a low of -40°F and increased 30°F by noon.

8. Plot a point at the low temperature.

9. Draw a ray along the number line to represent the increase of 30°F .

10. What was the temperature in the town by noon?

$$-40 + 30 = -10^{\circ}$$
