

Grade 6 Accelerated
Unit 10
Lesson 8 Practice

Name _____
Date _____
Period _____

Scenario 1: Imagine a market researcher surveys 45 people on their breakfast-eating habits. She wants to know whether people in the local region eat breakfast every morning before leaving their home.

1. In this scenario, what is the sample?
2. In this scenario, what is the population?

Scenario 2: Brenda wants to collect data on the favorite music genre of young people in Titusville, Florida. She decides to go outside a local music store and ask every person who comes into the store during the morning and afternoon about their music preferences.

3. What is the population?
4. What is the sample?
5. Explain why a sample chosen in this way may not be representative of the population.

Scenario 3: Morgan is going to sell cookies outside of her house to raise money for her troop. She wants to predict her sales and estimate how many days she must sell the cookies. She is considering three different methods for surveying a sample. Describe the benefits and problems with each of the possible survey methods.

6. Ask everyone on her class if they like cookies and how many will they eat in a day.
7. Ask all people younger than 15 around her house if they like cookies and how many will they eat in a day.
8. Ask all neighbors around her house if they like cookies and how many will they eat in a day.
9. Explain which of the methods from questions 6, 7, and 8 would be the most likely to produce a sample that is representative of the population.
10. Determine a better way to select a sample for this study.
