

Use the table below to answer questions 1-3

The table shows transactions for 3 different checking accounts. A negative number represents a debit and a positive number represents a credit.

Account 1	Account 2	Account 3
\$225.90	\$318.25	\$253.30
-\$31.65	\$22.15	-\$112.25
\$98.70	-\$102.40	\$89.10
\$45.90	-\$19.70	-\$14.15

1. What is the ending balance of Account 1?

$$225.90 - 31.65 + 98.70 + 45.90 = \$338.85$$

2. What is the ending balance of Account 2?

$$318.25 + 22.15 - 102.40 - 19.70 = \$218.30$$

3. What is the ending balance of Account 3?

$$253.30 - 112.25 + 89.10 - 14.15 = \$216.00$$

Use the information below to answer questions 4-5.

Foster recently went on a weekend hiking trip and recorded the elevation changes at several checkpoints. Foster's elevation log can be seen in the table below.

Checkpoint	Beginning Elevation (ft)	Final Elevation (ft)
1	-125.4	-78
2	-78	-101.6
3	-101.6	14.7
4	14.7	225.1

Final – Beginning

47.4
-23.6
116.3
210.4

4. Which checkpoint at the greatest change in elevation?

4

5. If the next checkpoint has a change a final elevation of 148.3, what is the change in elevation?

$$148.3 - 225.1 = -76.8 \text{ ft.}$$

6. Stanley's office has a parking garage that charges \$12.75 each day for parking. Stanley's employer provides him with a parking card that has \$250 each month. When Stanley parked today, the card indicated it had \$84.25 left on the card. How many days has Stanley used the card for parking this month?

$$\frac{250 - 84.25}{12.75} = 13 \text{ days}$$

7. Tanner is traveling on his first flight to visit family. $9\frac{3}{5}$ minutes into the flight, the pilot announces the plane is currently at an altitude of 6.15 miles. What was the rate, in minutes, the plane reached to this cruising altitude?

$$\frac{6.15 \text{ miles}}{9\frac{3}{5} \text{ min}} = \frac{x \text{ miles}}{1 \text{ min}} \quad x \approx 0.64 \text{ miles} \quad \text{Rate} = 0.64 \text{ miles per minute}$$

8. A penguin sitting on an iceberg notices a fish swimming below. The fish is 15.6 ft below sea level. The penguin dives and reaches the fish in $\frac{5}{8}$ of a minute. What was the rate of descent the penguin made?

$$\frac{15.6 \text{ ft}}{\frac{5}{8} \text{ min}} = \frac{x \text{ ft}}{1 \text{ min}} \quad x = 24.96 \quad \text{Rate} = 24.96 \text{ ft per minute}$$

9. The temperature in Alaska today was -58.8°C . Over the next 4 weeks, the temperature will increase an average of 3.6°C each week. What will the temperature be at the end of the 4 weeks?

$$-58.8 + (4 \cdot 3.6) = -44.4^\circ\text{C}$$

10. Phoebe buys her dogs a bag of food that is 80.6 ounces. Each of Phoebe's dogs eat $\frac{7}{16}$ ounces a day. If she has 3 dogs, how long will the bag of dog food last Phoebe?

$$\frac{80.6}{3 \cdot \frac{7}{16}} \approx 61 \text{ days}$$
