

6Ath Grade: Unit 12, Lesson 4

1. What does a markup represent in terms of price?

2. A good, with a value of \$9.20 and a markup of 35%, can be found using a percent proportion as shown below. What is the markup of the good?

$$\frac{\text{markup}}{\$9.20} = \frac{35}{100}$$

3. What is applied to goods or services so that the seller is able to make a profit?
