

Grade 6 Accelerated
Unit 12
Lesson 5 Practice

Name _____
Date _____
Period _____

For each problem, round your answer to the nearest hundredth, if necessary.

1. The original price of a wooden table is \$53. With a discount of the 30%, what is the sale price?

2. Michelle buys a dress online for \$62. The shipping company charges 7% of the item price to make the delivery. How much does the dress and shipping cost for Michelle?

3. A store purchased a new cash register for \$523.64, without tax. After a 4% sales tax, what is the total price the store must pay?

4. The sales tax rate is 3%. If Gus buys a new pair of shoes priced at \$123.84, what will be the total cost including tax?

5. A furniture company sold a sofa for \$657. Including sales tax, the total of sofa is \$764.78. What is the percent of sales tax?

6. A TV cost the company \$378 and is selling it for \$483. What is the markup percentage?
7. Roger bought an item that cost \$64.30. After sales tax, the total is \$68.99. What is the sales tax percentage?
8. A bill for a restaurant came out to be \$142.60. The customer tips 13% of the bill. How much is the tip?
9. Rosa and her husband are celebrating their anniversary and went for a nice dinner. After the meal, the total bill was \$175.20. A 15% tip was included in the total bill. How much does dinner cost before the tip?
10. Some friends went to a grocery store and bought snacks to watch the football game. The total was \$76.82. They were also charged 4% in sales tax. How much was the total cost of the bill, after tax?
