

6Ath Grade: Unit 12, Lesson 8

1. What is interest earned on interest over time?
2. The Simple Interest Formula is $I = p \times r \times t$. What does the r represent in the formula?
3. What is based on the principle, regardless of the accrued interest?
4. What is a percent error?

5. What is the percent error if the estimated value is 72 and the actual value is 65. Write the answer as a decimal rounded to the nearest hundredth.

$$\frac{|Estimated\ Value - Actual\ Value|}{Actual\ Value}$$

6. What sign should the percent error always be?

7.
