

Grade 6 Accelerated
Unit 13
Lesson 10 Homework

Name _____
Date _____
Period _____

Determine if the expressions are equivalent for the given values.

	Value	$7x + 3x - 6$	$2(5x - 8) + 10$	Equivalent?
1.	$x = -3$			☐ yes ☐ no
2.	$x = 0$			☐ yes ☐ no
3.	$x = 0.3$			☐ yes ☐ no
4.	$x = \frac{1}{2}$			☐ yes ☐ no

5. Depending on the value being substituted into the expressions, the evaluated

expressions

- ☐ always
☐ sometimes
☐ never

had the same value as each other.

Determine whether the expressions are equivalent for the given values.

		$\frac{1}{3}(9 + 6y) + 4x$	$2\left(2x + y + \frac{3}{2}\right)$	Equivalent?
6.	$x = -2$ $y = 6$			☐ yes ☐ no
7.	$x = 0$ $y = 1$			☐ yes ☐ no
8.	$x = \underline{\hspace{1cm}}$ $y = \underline{\hspace{1cm}}$			☐ yes ☐ no

Determine if the following algebraic expressions are equivalent using any method you choose.

	Expression A	Expression B	Equivalent?
9.	$x(9 - 11) - \frac{3}{5}(10 + 15x)$	$-11x - 15$	☐ yes ☐ no
10.	$\frac{5}{9}(6x + 12x) - (25 + 3x)$	$-25 + 10x$	☐ yes ☐ no
