

6Ath Grade: Unit 13, Lesson 10

1. What is the resulting value when substituting $x = 0$ into the expression $8x - 5x + 1 - 7$?

2. Using substitution, are the following expressions equivalent?

Expression 1: $9 - x - 6 + 4x$

Expression 2: $-7x + 3x + 12$

3. When two algebraic expressions produce the same values when evaluated using different values of x , but do not have the same number of terms and/or operations, these two expressions are what?
