

Grade 6 Accelerated
Unit 14
Lesson 5 Homework

Name _____
Date _____
Period _____

Write and solve an algebraic equation for each of the following.

1. Hiro has 18 highlighters, which is 4 fewer than Martin has. How many markers does Martin have?

2. A college engineering program receives 1,245 applications this year, of which only 200 can be accepted. How many students are not accepted?

3. Pepper has an 8 pack of markers. She let Shawn borrow some of her markers from the box. When she counted the markers in the box again, she had 5 remaining. How many markers did Shawn borrow?

4. Mrs. Tuttle took her class to the media center for their class photo. Of her 18-student class, only 13 were present for picture day. How many students were absent?

5. Jasmine consumed a total of 1,450 calories of her 2,000 daily calorie limit. How many more calories can Jasmine consume?

6. A grocery store set out 78 apples on a display stand. At the end of the day, there were 31 apples remaining. How many apples were sold?
7. A soccer team is doing a car wash to raise money. The team earned 395.45 between cars and donations. If \$176.40 was raised from washing cars, how much was made from donations?
8. Kiegan collected 9 more items than his cousin Joel did for the annual toy drive. Joel collected 15 items. How many items did Kiegan collect for the toy drive?
9. A custom bench was delivered and turned out to be too long. 4 inches were removed from the bench to make the new length 36 inches in length. What was the original length of the bench, in inches, when it was delivered?
10. Sarah was sharing a story about her favorite birthday party from 8 years ago. If Sarah is now 21, how old was she at her favorite birthday party?
