

Grade 6 Accelerated
Unit 14
Lesson 8 Homework

Name _____
Date _____
Period _____

Write and solve an algebraic equation for each of the following.

1. At a restaurant, 6 friends decided to split the bill evenly. If each person paid \$14, what was the total bill?

2. A Great White Shark has 300 teeth. If the teeth are evenly arranged into 3 rows of teeth, how many teeth are in each row?

3. A school has a budget of \$400,000 for support staff members. If each support staff member makes \$40,000 each, how many support staff members can the school employ?

4. During a math adoption, there were 4 textbook company finalists invited to present their materials to the school district. For spacing purposes, each company could only bring a maximum of 3 people each. What is the maximum amount of people that could attend from the textbook companies?

5. A princess dress takes 6 yards of fabric to create. If an order is placed for 9 dresses, how many yards of fabric will be needed?

6. A certain apple tree can produce 210 apples at a given time. If the apples are placed into bins that can hold 21 apples each, how many crates will be needed for the entire tree?
7. A recipe for Red Velvet cake calls for 1.5 sticks of butter for each cake. If someone wants to make 4 cakes, how many sticks of butter will be needed?
8. A new home builder offers 6 different floorplans, each that come with 5 color pallet options per floorplan. What is the number of different options that a buyer has with this builder?
9. A garment moving box can hold 8 suit jackets. If 4 garment boxes can fit in the back of a vehicle, what is the maximum number of suit jackets that can be moved in one trip?
10. Thelma is participating in a Walk-a-Thon where she will get \$0.25 per lap that she walks. How many laps would she need to walk to reach a goal of \$50?
