6Ath Grade: Unit 14, Lesson 8

1. What is the inverse operation of addition?

2. Maria is buying new tile to lay on the floor of her basement. Each tile covers 4 square feet. The area of her basement floor is 72 square feet, so she needs to buy 18 tiles. Write a division equation that represents this situation.

3. A group of students, s, went to an amusement park. If each admission ticket cost $8, write an expression the represents the total amount of money spent on tickets.
