Unit 15
Lesson 7 Homework

Name Answer Key
Date _____
Period _____

The Smith family has 3 children and want one more child to complete their family. $\frac{1}{3}$ of the children are girls and the rest are boys.

1. What is the probability that the next child will be a girl, represented as a percent rounded to the nearest hundredth?

$$\frac{1}{2} = 0.5 = 50\%$$

2. What is the theoretical probability that the next child will be a girl?

$$\frac{1}{2}$$

Describe how each of the following can be used to simulate if the next child will be a girl.

3. A spinner with 10 equal sections.

Answers may vary.

Half of the sections represent a boy, the other half represent a girl.

4. A fair six-sided die.

Answers may vary.

Even numbers represent a boy, odd numbers represent a girl.

5. A standard 52-card deck.

Answers may vary.

Hearts and diamonds represent a boy, clubs and spades represents a girl.

The weather forecast says there is a 50% chance it will rain today.

Describe how each of the following can be used to simulate if it will rain today.

6. A coin

heads – rain	or	heads – no rain
tails – no rain		tails - rain

7. Different numbers in a box

Answers may vary.

even numbers – rain

odd numbers – no rain

*as long as there is an even amount
of numbers in the box

There are 4 types of blood: A, B, AB, and O. Blood type is determined by genes inherited from parents. Suppose that a type AB blood donor is needed at a local hospital for a patient. 0.4 donors have type AB blood.

8. Find the probability that the next donor will not have type AB blood?

0.6

9. What is the theoretical probability the next donor will have type AB blood?

$\frac{1}{4}$

10. Describe a way to simulate the probability the next donor will have type AB blood?

Answers may vary.

Spin a four colored spinner with one of the colors representing AB blood.
