6Ath Grade: Unit 11, Lesson96

1. Given the expression, $[15 - (2 + 4)^3] - 15 \div 3$, what is the next correct step using order of operations?

2. What is the correct first step to evaluate the expression, $12^2 - (4 + 6) + [2 + (-3)^3]$, using the order of operations?

3. What is a possible step to evaluate the following expression?

$$(-2)^3 + [-56] - 3 \times 4$$
