

Algebra 1: Unit 2, Lesson 3

1. A student simplified the expression $\frac{45x^{11}}{9x^8}$ by $(45 \div 9)(x^{11+8})$. There is an error in the student's process. Identify the error and correct it.
2. Simplify the expression $3y^{-4} \cdot 3y$.
3. Another student simplified the expression $\left(\frac{2x^3 \cdot 3x^2}{6x^2}\right)^3$ to $\frac{2x^9 \cdot 3x^6}{6x^6}$. There is an error in the simplified expression. Rewrite the simplified expression.
