

1. Model the following expression with algebra tiles.

$$5x - 4$$

Use the expression $(2y + 1)(y - 4)$ for questions 2 – 4.

2. Complete the model to find the product of $(2y + 1)(y - 4)$ by drawing and labeling the missing tiles.

3. Determine how many of each tile are represented in the product and write the numbers in the table.

y^2 tiles	$+y$ tiles	$-y$ tiles	$+1$ tiles	-1 tiles

4. Complete the statement.

The product of $(2y + 1)(y - 4)$ is _____.

For questions 5-9, use algebra tiles to find each product.

5. $(4 - 3x)(x - 1) =$ _____

6. $(2x - 1)^2 =$ _____

7. $(x - 3)(x + 3) =$ _____

8. $(x - 5)(x + 1) =$ _____

9. $(1 - x)(2x + 2) =$ _____

10. One of your classmates was absent when you learned how to multiply polynomials using algebra tiles. Write them a note explaining the process.
