

## Algebra 1: Unit 2, Lesson 7

1. What is the product of the expression  $(6 + 5m)(8m)$ ?

2. A student simplified the expression  $-10 + 2(-9 - 11t)$ . Complete the missing step.

Original Expression:  $-10 + 2(-9 - 11t)$

Step 1: \_\_\_\_\_

Step 2:  $-28 - 22t$

3. The order of operations can be applied to simplify the polynomial  $5 - 2(7q - 6)$ .

Complete the table.

|               | $5 - 2(7q - 6)$ . | Description                     |
|---------------|-------------------|---------------------------------|
| <b>Step 1</b> | $5 - 14q + 12$    | Distribute $-2$ to $(7q - 6)$ . |
| <b>Step 2</b> | _____             | Combine like terms.             |
