

Algebra 1
Unit 2
Lesson 8 Practice

Name _____
Date _____
Period _____

1. Rewrite the expression in each step using the description: $6(x + 4) + 3x$

	Distribute the 6 to $(x + 4)$.
	Combine like terms.

2. Rewrite the expression in each step using the description: $-3x + 5(-2x - 5)$

	Distribute the 5 to $(-2x - 5)$.
	Combine like terms.

Use the order of operations to simplify each polynomial.

3. $3(x + 5) + 2(x - 8)$

4. $\frac{3}{5}(x - 6) + 3x$

5. $-2(x^2 + 4x) + 7(x - 2)$

6. $2x^2 - 45(x - 7)$

7. $(x + 3)(x - 5) - 9(2x^2 + 3x)$

8. $-\frac{1}{3}(6x - 12) + 7x$

9. $2x^2 + (x + 5)(x - 5)$

10. $3x(x - 4) + 7(x - 3)$
