

Algebra 1
Unit 2
Lesson 8 Homework

Name _____
Date _____
Period _____

1. Rewrite the expression in each step using the description: $-2(x - 2) + 3x$

	Distribute the -2 to $(x - 2)$.
	Combine like terms.

2. Rewrite the expression in each step using the description: $5x + 6(2x + 7)$

	Distribute the 6 to $(2x + 7)$.
	Combine like terms.

Use the order of operations to simplify each polynomial.

3. $4(x - 3) + 6(x - 2)$

4. $\frac{2}{3}(x - 3) + 6x$

5. $2(x^2 - 3x) + 4(x + 5)$

6. $4x^2 - 4(x - 8)$

7. $(x + 2)(x - 3) - 6(x^2 + x)$

8. $-\frac{2}{5}(5x - 15) + 5x$

9. $x^2 + (x - 2)(x - 2)$

10. $4x(x + 1) + 2(x + 5)$
