

Algebra 1: Unit 2, Lesson 8

1. Write the expression that is equivalent to $xy - 9 - y(x + 13)$.

2. A polynomial is shown.

$$5(x - 9y^3) + 7y^3 - 2(5x + 3y^3)$$

Complete the statement.

When adding and subtracting polynomials that include distribution, first distribute the monomials, then _____.

3. Complete the missing step to simplify the expression $-6h(6 + h) - 14 - 3(5 - 4h)$.

$$-6h(6 + h) - 14 - 3(5 - 4h)$$

$$-36h - 6h^2 - 14 - 3(5 - 4h)$$

$$-24h - 6h^2 - 29$$
