

For questions 1 through 4, a table of values representing a linear relationship is shown.

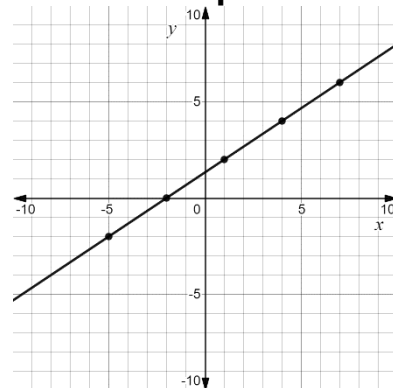

x	-1	0	3	8
y	-3.4	-3	-1.8	0.2

- Find the slope of the line. Show your work.
- Write the equation of the line modeling this table in point-slope form.
- Rewrite the equation of the line in slope-intercept form.
- Rewrite the equation of the line in standard form.

A table and graph for a linear function, $g(x)$ are shown. Use the table and graph for questions 5 and 6.

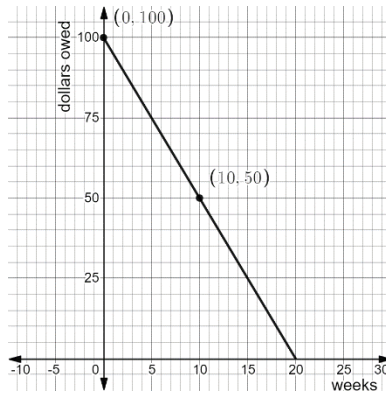

Table

x	$g(x)$
-5	-2
1	2
7	6

Graph

- Write the equation of the line in point-slope form.
- Write the equation of the line in slope-intercept form.

Brandon borrowed \$100 from his grandmother for summer camp. He agrees to repay her \$5 per week until he has paid the money back. The graph of this linear relationship is shown. Use the graph to answer questions 7 through 10.

7. Find the slope of the line.
8. Write the equation of the line in point slope form.
9. Write the equation of the line in slope-intercept form.
10. Write the equation of the line in standard form.
