

Algebra 1: Unit 3, Lesson 7

1. A scatter plot, line of best fit and a regression analysis is shown for a linear equation fit to model the data.

What is the equation for the line of best fit?

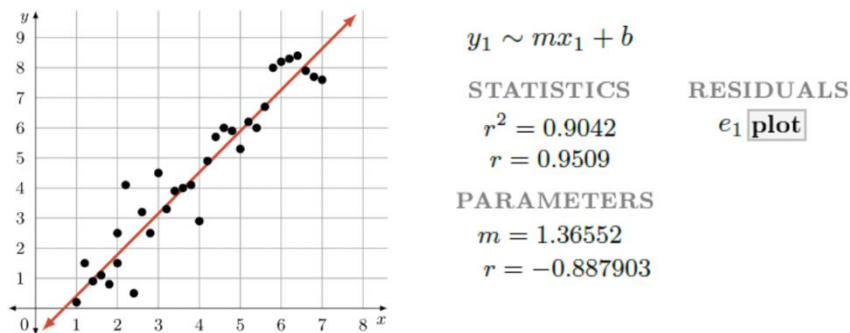

2. Caleb, the owner of a pontoon boat rental, wondered if there was a trend between the outside temperature, in degrees Fahrenheit ($^{\circ}\text{F}$), and sales from pontoon rentals, in dollars. Caleb used the data he collected to create the scatter plot shown.

Complete the statements.

The slope of the line of fit is _____. This means that as the outside temperature _____, sales from pontoon boat rentals _____.

3. A scatter plot, line of best fit and a regression analysis is shown for a linear equation fit to model the data.

What is the correlation coefficient?
