

Algebra 1: Unit 4, Lesson 2

1. The graph of function $3x - 7y = 183$ is shown.

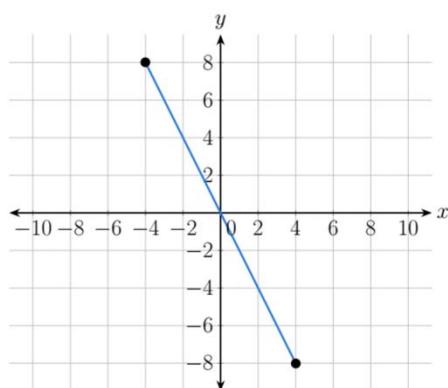

What is the x -intercept of $3x - 7y = 18$?

2. The graph of the function $10x + 4y = 20$ is shown.

What are the coordinates of the x - intercept?

3. A graph of a partial function is shown on a coordinate plane.

What is the domain of this function in interval notation?
