

Algebra 1: Unit 4, Lesson 4

1. A student uses the model $n = 1.5t + 4$, where t is the number of seasons since 2012 and n is the number of wins, to describe a high school basketball team's winning record over an 8-year period. The model is shown on the graph.

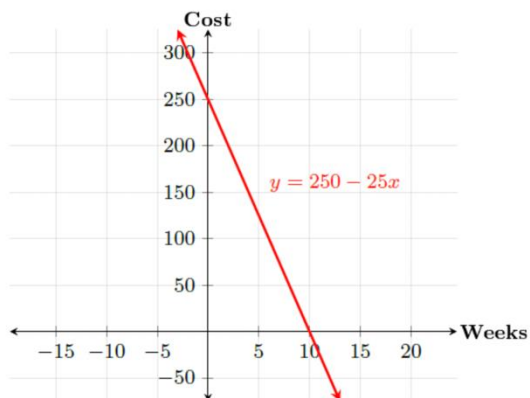

What is the range of the function in inequality notation?

2. The graph shown models the total income in relation to the number of visits to a community pool as follows:

What does the y -intercept represent?

3. You saved \$250 to spend over the summer. You decide to budget \$25 to spend each week. This can be modeled in the graph provided.

What is the x - intercept?
