

Algebra 1
Unit 4
Lesson 11 Practice

Name _____
Date _____
Period _____

1. Write the equation of the line that passes through $(4, 2)$ and is perpendicular to $y = 3x + 1$ in point-slope form.
2. Write the equation in slope-intercept form of the line that is perpendicular to $x = 2$ and passes through point $(2, -1)$.
3. Write the equation of the line that contains point $(-5, 5)$ and is perpendicular to $\frac{5}{9}x - y = 4$ in standard form.
4. Write the equation of the line that is perpendicular to $2x + 5y = 6$ and passes through the origin.
5. Line F passes through $(-12, 0)$ and is perpendicular Line Z which has an undefined slope. What is the slope of line F ?
6. Write the equation of the line that is perpendicular to the line that passes through the points $(7, -3)$ and $(7, 14)$ and passes through point $(4, -\frac{1}{2})$.
7. Write the equation of a line that is perpendicular to $-y = -x$ and contains point $(-1, -1)$.

8. Write the equation of the line, in all three forms, that passes through point $(6, -2)$ and is perpendicular to $y + 3 = -7(x + 1)$.

Point-Slope Form	Slope-Intercept Form	Standard Form

9. Write the equation of the line, in all three forms, that is perpendicular to the line that passes through the points $(20, 0)$ and $(0, -10)$ and passes through point $(-10, 10)$.

Point-Slope Form	Slope-Intercept Form	Standard Form

10. Write the equation of the line, in all three forms, that is perpendicular to the line that passes through the points $(8, 9)$ and $(-4, -7)$ and passes through point $(0, -5)$.

Point-Slope Form	Slope-Intercept Form	Standard Form
