

Algebra 1: Unit 5, Lesson 1

1. The equation, $x - 5(x + 6) = 14$, is incorrectly solved in the table shown.

Step	Work
1	$x - 5(x + 6) = 14$
2	$x - 5x - 30 = 14$
3	$x - 5x = -16$
4	$-4x = -16$
5	$x = 4$

Which step has an error in solving the equation?

2. What value of x makes the equation, $-7x + 12 = -5x$, true?

3. The equation $5 + 3x - 7(x + 1) = 9$, is incorrectly solved in the table.

Step	Work
1	$5 + 3x - 7(x + 1) = 9$
2	$5 + 3x - 7x - 7 = 9$
3	$-4x - 2 = 9$
4	$-4x = 11$
5	$x = \frac{11}{4}$

What is the correct value of x that makes the equation true?
