

Algebra 1
Unit 5
Lesson 3 Homework

Name _____
Date _____
Period _____

1. The parts of each equation below are identified by a symbol. Sort the cards into the boxes below by sketching their symbol into the box.

Cards

$$y = -0.2 \cdot x + 3$$

△ ◇ □ ○

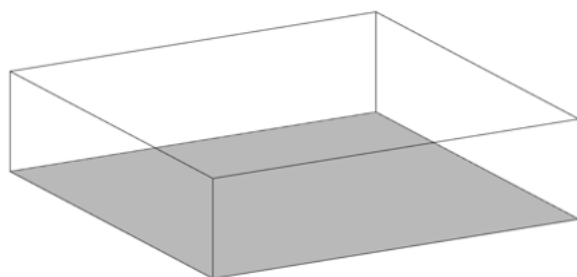

$$11 + -0.2 \cdot m = 9$$

⊖ ♥ ★ ⊙

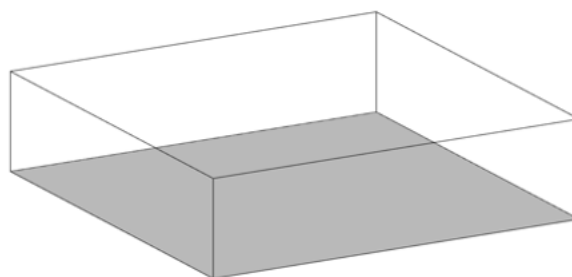

$$y = -0.2 \cdot x + 3$$

⬠ ∩ ✕ ☒

Boxes

Parameters

Variables

May opened her bank account with money she received as a birthday present. She also deposits the money she saves monthly. The balance, in dollars, in May's bank account after x months can be modeled using the equation $y = 10x + 25$.

- Which term(s) in the equation are variables?
- Which value(s) in the equation are parameters?
- What does the value 25 mean in terms of the balance in May's account?
- What does the value 10 mean in terms of the balance in May's account?

Choose numbers from the positive digits 1 – 9 to fill in the boxes below for questions 6-10.

$$y = \boxed{} \cdot x + \boxed{}$$

6. Create a scenario that your equation could model.

7. List the variables in your equation.

8. What do each of the variables represent in terms of your scenario?

9. List the parameter in your equation.

10. What do each of the parameters represent in terms of your scenario?
