

Algebra 1: Unit 5, Lesson 3

1. Sarah planted sunflowers in her garden. They were 2 feet tall when she first planted them. She read that they will grow approximately $\frac{5}{2}$ feet per month.

The equation, $h = a + bt$, represents this scenario where h represents the height of the sunflowers, in feet and t is the number of months after the sunflowers were planted.

What is the value of a ?

2. Sam picked 7.2 pounds of tomatoes. She eats 0.1 pounds of these tomatoes each day.

Write an expression that represents the amount of pounds of tomatoes left at the end of each day, where d represents how many days have passed after Sam picked the tomatoes.

3. Savannah sells oranges for \$2 per dozen. What does the expression, $2x$ represent?
