

Algebra 1: Unit 5, Lesson 4

1. Melissa rents out her barn for weddings and special events. She charges \$100 a hour for space. The equation, $y = 100x$, can be used to model this situation.

If the space is rented for 5 hours, what is the rental fee?

2. Azia wants to run 26.2 miles every week. She plans to run 8.3 miles each day until she reaches her goal. The equation that represents this scenario is $8.3x = 26.2$.

How many days must Azia run to meet her goal?

3. Martha takes her dogs to doggy daycare. It costs \$30 a day for both dogs to attend. The equation, $y = 30x$, can be used to model this situation.

What does the variable, y , represent?
