

Algebra 1: Unit 5, Lesson 5

1. Eve had to purchase 2 bags of chocolate chips for her cookie recipe. She paid \$20 and received \$5.86 in change. How much was each bag of chocolate chips?

What does the variable represent in this situation?

2. Trudee has to read 750 pages for her English class. On the first night of the assignment, Trudee read 85 pages. Trudee needs to finish the book in the next 7 days.

The variable x represents the number of pages to read each night.

Write an equation that can be used to find the number of pages, on average, Trudee needs to read each night.

3. Eve's cookie business has grown so much that she needs to hire an assistant. She posted an advertisement that states she will pay a base rate of \$25.00 a day plus \$0.20 for each cookie the assistant will make.

What is the constant, in this context?
