Unit 6
Lesson 1 Practice

Name _____
Date _____
Period _____

Alanna made a mistake when solving the inequality $\frac{-7n+15}{8} - 5 \geq 3$. For questions 1-4, use Alanna's work below.

Given Inequality	$\frac{-7n + 15}{8} - 5 \geq 3$
Step 1	$-7n + 15 - 5 \geq 24$
Step 2	$-7n + 10 \geq 24$
Step 3	$-7n \geq 14$
Step 4	$n \leq -2$

- Identify the step in which Alanna made an error. Write a note to Alanna explaining why that step was incorrect.
- Solve the inequality $\frac{-7n+15}{8} - 5 \geq 3$.
- Write the solution in set-builder notation.
- Graph the solution set.

Use the inequality $0.06m + 2.56 > -0.15m + 8.86$ to complete questions 5-7.

5. Solve the inequality.

6. Write the solution in set-builder notation.

7. Graph the solution set.

Use the inequality $-\frac{1}{2}(5n + 2) \leq -\frac{1}{3}(10n - 2)$ to complete questions 8-10

8. Solve the inequality.

9. Write the solution in set-builder notation.

10. Graph the solution set.
