

Algebra 1: Unit 6, Lesson 2

1. A compound inequality is shown.

$$-6 \geq 6x > 42$$

What is the solution for the compound inequality?

2. A compound inequality is shown.

Write the inequality.

3. A compound inequality is shown.

$$-7 < 7x \leq 42$$

Complete the statements.

To solve the compound inequality, rewrite the compound inequality as the two single inequalities then, divide both sides of each inequality by _____.
