

Algebra 1: Unit 6, Lesson 4

1. An inequality and its graph are shown.

$$y < 3x + 1$$

The point $(0,0)$ is in the shaded region of the graph, therefore it _____ in the solution set of the inequality.

2. The graph of an inequality is shown.

The boundary line of the graph is solid, therefore the points on the boundary line are included in the solution set. If m and b are both positive, what inequality can be represented by the graph?

3. An inequality is shown.

$$y > x$$

Complete the following statements.

The inequality means that the relationship between the values of x and y is that all the solutions will have an x -value that is _____ the y -value.
