

Algebra 1: Unit 6, Lesson 6

- Jeffrey is going on vacation and has a budget of \$225 to spend on renting a car. The agency rents cars for \$27 per day plus \$0.80 per mile driven. The situation can be represented by the inequality $27x + 0.8y \leq 225$, where x is the amount of days and y is the amount of miles driven.

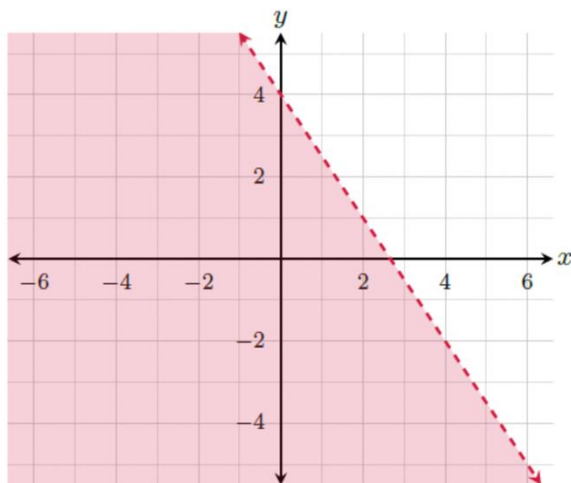

Determine if the point $(-4,6)$ is a viable solution or not and why.

- A line is shown on the graph.

What is the equation of the line in slope-intercept form?

- The linear inequality $2y < -3x + 8$ is shown on the graph.

The coordinate $(2,1)$ _____ a solution to the inequality.
