

Algebra 1: Unit 6, Lesson 7

1. The graph of $y \leq 2x - 6$ is shown.

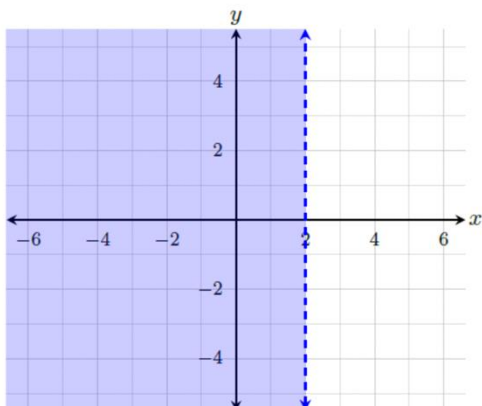

The coordinate (1,5) _____ a solution to the inequality $y \leq 2x - 6$.

2. The graph of the solution set of $2x - 3y < 6$ is shown.

Equivalent inequalities have the same solution set. What is the equation of the inequality in slope-intercept form?

3. A graph of an inequality is shown.

What is the inequality that represents the solution set represented by the graph?
