

Algebra 1: Unit 6, Lesson 10

1. The graph of the system of two inequalities, $y \leq x - 2$ and $y > 3x + 2$, is shown.

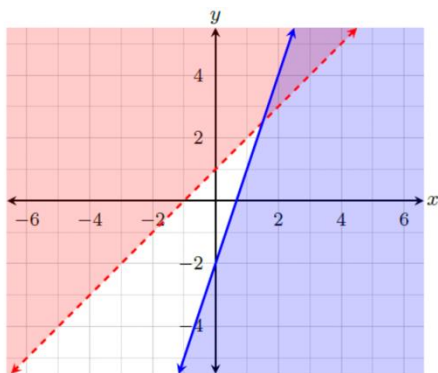

Does the system have solutions and why?

2. The boundary lines of the system of two inequalities, $2x + y < 4$ and $x - 3y > 5$, are shown.

Determine whether the point (3,0) belongs in the solution set of inequality $2x + y < 4$.

3. A graph of a system of inequalities is shown.

Will the system of inequalities $y > x + 1$ and $-3x + y \leq -2$ have the same solution?
