

Teacher Guide - Factoring Activity

Activity Description

Students will practice factoring trinomials with a coefficient equal to one by matching trinomials with their binomial factored pairs.

Objectives

Students will be able to...

- Multiply binomial factors to arrive at a trinomial expression
- Factor trinomial expressions in one variable

Required Time – 30 minutes

Required Materials

- Factor Card Sheets
- Scissors
- Envelopes
- Factoring Activity Student Worksheet

Instructions

Prior to the using this activity, the teacher will print and cut out the individual triangles on the following page for the number of groups participating.

Place the triangle pieces into an envelope for each group. Students will match the quadratic expressions on the edge of one triangle with the factors of that expression on the edge of another triangle.

The teacher can check students work against the answer key on the next page.
