

Algebra 1: Unit 7, Lesson 4

1. Taylor is factoring $3x^2 + 7x + 2$ by grouping. His partial work is shown in the table. Complete the missing step.

Step	$3x^2 + 7x + 2$
1	$3x^2 + 1x + 6x + 2$
2	
3	$(x + 2)(3x + 1)$

2. What is the factored form of the trinomial $h^2 - h - 42$?

3. Brody is factoring $3x^2 + 11x - 20$ by grouping.

Write the equivalent expression in the factored form.
