Pringles® Intro to Quadratic Equations

Below you will find the Desmos link for "Pringles® Intro to Quadratic Equations" with Math Nation. Introduction to quadratic equations is an inquiry-based activity for students to visualize the graphs of quadratic equations in standard, vertex, and factored form when they undergo various transformations.

Students will approximate the equation of the parabola formed by a Pringles® chip from both front and side angles then make predictions about optimizing Pringles® packaging from a business point-of-view.
